

SURFACE DEMOLITION LTD

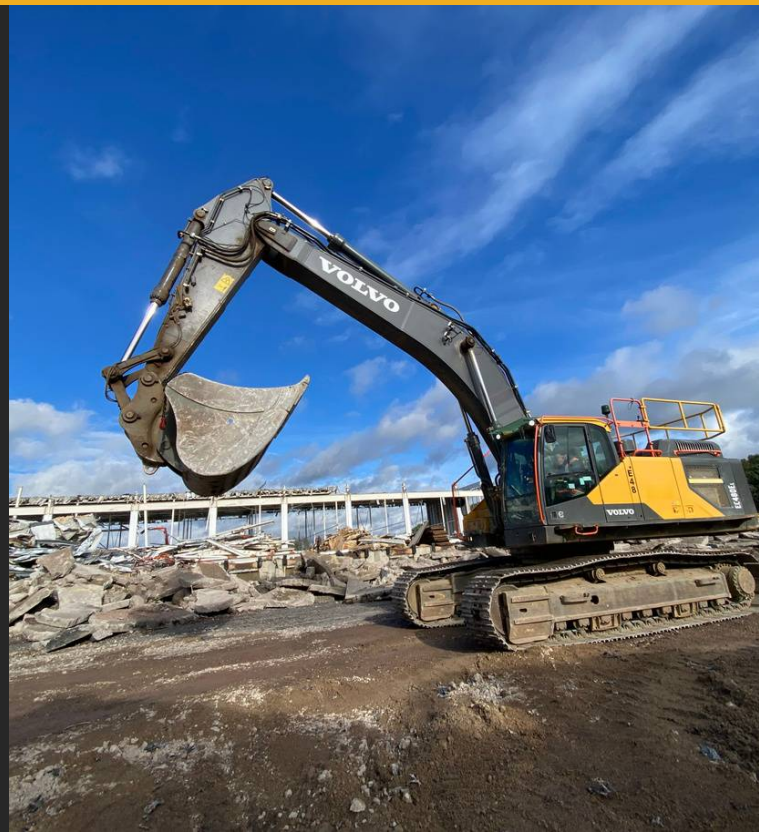

'A CONCRETE DEMOLITION COMPANY'

GOLIATH WAREHOUSE, COVENTRY.

Surface Demolition efficiently removed 40 acres of slabs & Founds at Goliath Warehouse in Coventry, starting with a thorough site assessment for risk management, along side concrete removal, Surface Demolition recycled large quantities of 40mm stone, utilising a crusher screener setup for use of the civil engineer's. They meticulously civilised the ground, and left the site in a safe and clean brown field condition. By focusing on all aspects of the demolition and clean-up process, Surface Demolition successfully met stringent safety and quality standards, demonstrating their dedication to excellence in project delivery.

DEMOLITION SOLUTIONS

Before any demolition work began, the team conducted surveys to identify any hazardous materials such as asbestos, lead, or other contaminants whilst also conducting bat surveys to ensure zero disruption was caused. Correct containment and removal procedures were implemented to ensure the safety of both the crew and the surrounding community. During the demolition process, specialised equipment and techniques were used to carefully deconstruct the building in a controlled manner. Structural elements were systematically dismantled to avoid collapse and minimise the generation of dust and debris.

SAFE WORK PROCESS'S

REMOVAL PROGRAM

RECYCLING WORKS

We focus on implementing strict protocols and guidelines to ensure the safety of workers during the demolition process. This includes conducting thorough inspections, providing proper training, and enforcing compliance with safety regulations to prevent accidents and injuries.

Our soft strip program is a systematic process of removing non-structural elements from a building before its demolition. This includes removing fixtures, fittings, and finishes to a high standard with the objective of salvaging materials for reuse or recycling.

We prioritise sustainability by striving to recycle as much demolition waste as possible. By partnering with recycling facilities and utilising efficient methods of reclamation, we reduce our environmental impact and contribute to a more sustainable construction industry.

COMPLETION STAGE

Customer satisfaction is a top priority for Surface Demolition. The successful completion of the demolition at Goliath Warehouse within specified timeframes allowed us to exceed projected targets in a safe manner. We place importance on building relationships with local businesses to ensure a smooth transition from demolition to brownfield site. Our dedication to customer satisfaction is demonstrated through the thorough preparation and delivery of a site ready for future development, while adhering to all site certifications and regulations.

LET'S TALK DEMOLITION ON YOUR PROJECT.

Contact us today to discuss your project needs. Let us provide expert advice and personalised solutions for all your demolition and recycling requirements.

We look forward to hearing from you!
